App Kit supported blockchains and tokens

Copy page

Review supported blockchains, tokens, and token aliases available for App Kit

Supported blockchains

Pick a tab to check blockchain support for each of App Kit's capabilities or adapters.

Capabilities Adapters

The following tables list blockchains that App Kit supports for each capability, split by mainnet and testnet.

Mainnet

Blockchain	Send	Bridge	Swap
Arbitrum	✅	✅	✅
Avalanche	✅	✅	✅
Base	✅	✅	✅
Codex	✅	✅	❌
EDGE	✅	✅	❌
Ethereum	✅	✅	✅
HyperEVM	✅	✅	✅
Ink	✅	✅	✅

Blockchain	Send	Bridge	Swap
Linea	✅	✅	✅
Monad	✅	✅	✅
Morph	✅	✅	❌
OP Mainnet	✅	✅	✅
Plume	✅	✅	✅
Polygon PoS	✅	✅	✅
Sei	✅	✅	✅
Solana	✅	✅	✅
Sonic	✅	✅	✅
Unichain	✅	✅	✅
World Chain	✅	✅	✅
XDC	✅	✅	✅

Testnet

Among testnets, only Arc Testnet supports Swap (USDC and EURC only). Use mainnet for Swap on any other blockchains.

Blockchain	Send	Bridge	Swap
Arbitrum Sepolia	✅	✅	❌
Arc Testnet	✅	✅	✅
Avalanche Fuji	✅	✅	❌
Base Sepolia	✅	✅	❌
Codex Testnet	✅	✅	❌

Blockchain	Send	Bridge	Swap
EDGE Testnet	✅	✅	❌
Ethereum Sepolia	✅	✅	❌
HyperEVM Testnet	✅	✅	❌
Ink Testnet	✅	✅	❌
Linea Sepolia	✅	✅	❌
Monad Testnet	✅	✅	❌
Morph Testnet	✅	✅	❌
OP Sepolia	✅	✅	❌
Plume Testnet	✅	✅	❌
Polygon PoS Amoy	✅	✅	❌
Sei Testnet	✅	✅	❌
Solana Devnet	✅	✅	❌
Sonic Testnet	✅	✅	❌
Unichain Sepolia	✅	✅	❌
World Chain Sepolia	✅	✅	❌
XDC Apothem	✅	✅	❌

Supported tokens

> You can specify either a contract address or an **alias** for any supported token.

Each App Kit capability supports different tokens:

- **Send**: Any token. Use **token aliases** for common tokens or the token's contract address for other tokens.

- **Bridge**: USDC only.
- **Swap**:
  - Any tokens with enough liquidity to trade with major stablecoins such as USDC, EURC, USDT, USDe, DAI, and PYUSD.
  - Native tokens on blockchains where Swap is supported.
  - On Arc Testnet, only USDC and EURC.

Token aliases

App Kit works with any supported token when you supply the contract address. For convenience, you can use the following aliases for the most common tokens instead:

- `USDC`
- `EURC`
- `USDT`
- `USDe`
- `DAI`
- `PYUSD`
- `NATIVE` : Uses the blockchain's native token.
