Tools

Node providers

Copy page

Node providers for reliable RPC access, transaction submission, and data queries on Arc.

Connect to the Arc network through third-party RPC infrastructure partners listed below. Each provider offers HTTP and WebSocket endpoints for submitting transactions, querying blockchain data, and subscribing to events. You can also use Arc's public endpoints directly.

Connection type	Public endpoint
HTTP RPC	`https://rpc.testnet.arc.network`
WebSocket	`wss://rpc.testnet.arc.network`
Chain ID	`5042002`

Providers

Alchemy

Developer platform providing scalable access to EVM networks with enhanced APIs, monitoring, and debugging tools.

Blockdaemon

Institutional-grade node provider offering secure and compliant infrastructure for Arc and other EVM chains.

dRPC

Decentralized RPC aggregator providing high-speed, load-balanced access to Arc nodes through a multi-provider architecture.

›

QuickNode

High-performance blockchain infrastructure offering global endpoints and APIs for developers.

You can connect directly to Arc's public RPC endpoint or through any of these infrastructure partners using your preferred SDK or web3 client.

You can also **run your own node** for independent verification and direct RPC access without third-party dependencies.
